Profile

Detail-oriented and proactive Implementation Engineer with 1 years of experience in deploying enterprise-level security solutions using PKI infrastructure and 2 years of experience in implementing CI/CD pipeline as a DevOps Engineer. Skilled in API testing, network architecture analysis, and automation through Bash scripting. Adept at collaborating with cross-functional teams to deliver secure, scalable, and efficient solutions. Strong communicator with a passion for problem-solving, continuous learning, and optimizing system performance in client-facing environments.

Technical Skills

1. Python with Flask
2. JavaScript
3. Linux Bash Scripting
4. API integration
5. Git , GitHub & Jenkins
6. Docker & kubernetes

Tools & Technologies

1. **Network & security:** Burp Suite, Wireshark
2. **Loadtest:** ApacheBench tool, JMeter
3. **API:** Insomnia, soapAPI
4. **DB:** Oracle

Work Experience

Implementation Engineer & DevOps Engineer

Odyssey Technologies, Chennai — June 2023 – Present

Aims to provides secure solutions over digital channels using PKI infrastructure. Contributes to provide Multifactor authentication services for end users(clients) for Data integrity, authentication and authorization.

1. Gained strong exposure to **API testing, network architecture analysis, and product deployment strategies.**
2. Performed extensive load testing and performance benchmarking using tools like apachebench and jmeter.
3. Conducted penetration testing and web application security assessment using **Burp Suite.**
4. Developed and maintained **Bash scripts to automate system tasks** and streamline deployment processes.
5. Worked closely with clients for requirement gathering, implementation, troubleshooting, and support.
6. Delivered end-to-end technical solution support, including deployment and configuration of Odyssey's security products tailored to client environments.
7. Analyzed client infrastructure and requirements to design scalable and compatible implementation architectures.

Responsibilities

1. Analyze and understand client's architecture and to provide network and server pre-requisites to client.
2. Server installation and deployment and configure the server for MFA services and load balancing.
3. Providing bug free code for performance improvement.

4. Taking forward client's new requirements and delivering scalable solutions as per client requirements.
5. Patch testing, bug reporting and patch deployment in client's UAT.
6. Load test for performance scalability with AB tool and JMeter.
7. Shell scripting in Linux for daily routine checks, automating activity network prechecks and patch deployment.
8. Hands-on with burp suite for vulnerability assessment and penetration testing. Also, to check the behavior of server.
9. API testing for 2FA services and server's admin console.

Personal project

1. Created a backed server using python and handled http and https requests to serve login and transaction pages using HTML and JS.
2. Integrated APIs into the server code to provide 2FA to the end user for authentication and authorization to allow authorized access to transactions for end users.

GITHUB link:

https://github.com/guruhemanth/Git/Project5/Project5/server_xorkeesign.py - server with API integration

Features:

User login, File upload and form transaction with 2FA enabled services.

Education

1. B.E. in Electronics and Communication Engineering (2019–2023) | Panimalar Institute of Technology, Chennai | CGPA: 8.54
2. Intermediate (B.I.E.) – Srichaitanya Junior College, Tirupati (2017–2019) | CGPA: 8.73
3. S.S.C. – Sri Chaitanya Techno School, Tirupati (2016–2017) | CGPA: 9.3

Projects & Certifications

1. Developed Smart Railway IoT solutions using IBM Watson IoT, Node-RED API, and MIT App Inventor.
2. Certifications: Python (Great Learning), HTML (Udemy).

Declaration

I hereby declare that all the information provided is true to the best of my knowledge.
